Subject: Outer mirror base cover discolors to white

DESCRIPTION

Some vehicles may experience that color of the outer mirror base cover changes to white.

CAUSE

The discolored area contains more glass fiber compared to other area. If this area was grinded by any reason, the glass fibers are exposed and it looks that it discolors to white.

MASS PRODUCTION CHANGE

The material of mirror base cover has been changed.

REPAIR PROCEDURE

If this concern has occurred on one side, please change the both sides of mirror base cover to modified one.

Note: If the outer mirror has already been changed to the modified one by any reason before, you do not need to replace it again.

For the modified parts number, please refer to parts catalog.

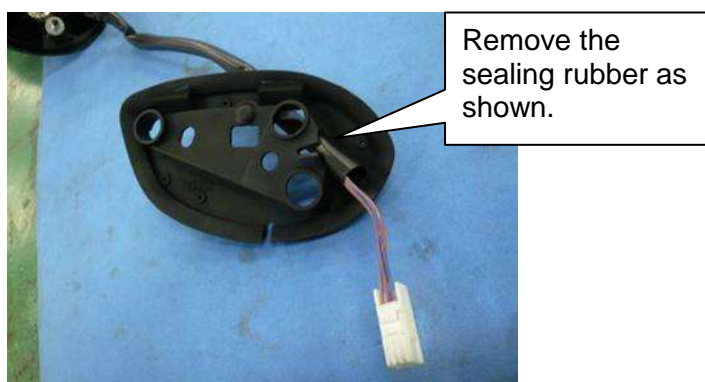

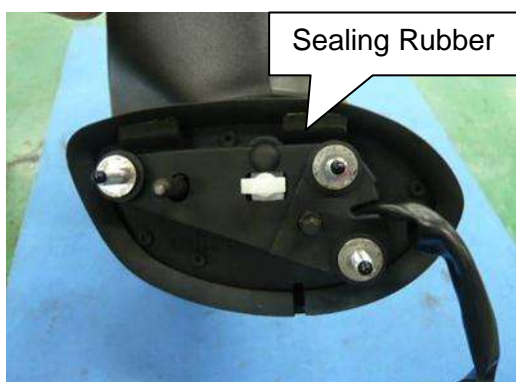

<Base cover replacement procedure>

1. Remove both sides or one side of outer mirror following the workshop manual "POWER OUTER MIRROR REMOVAL/INSTALLATION".

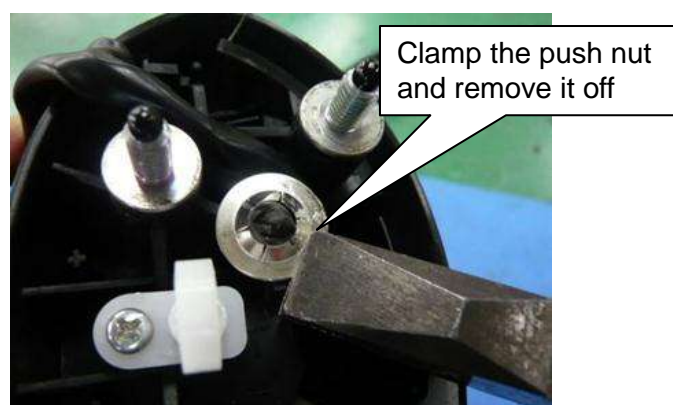

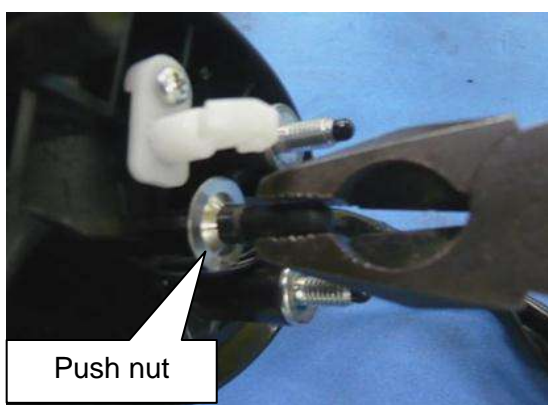

Note: Remove the outer mirrors at unfolded position. If it is removed at fold-in position, the following procedures cannot be operated.

* The following procedure shows left side mirror.

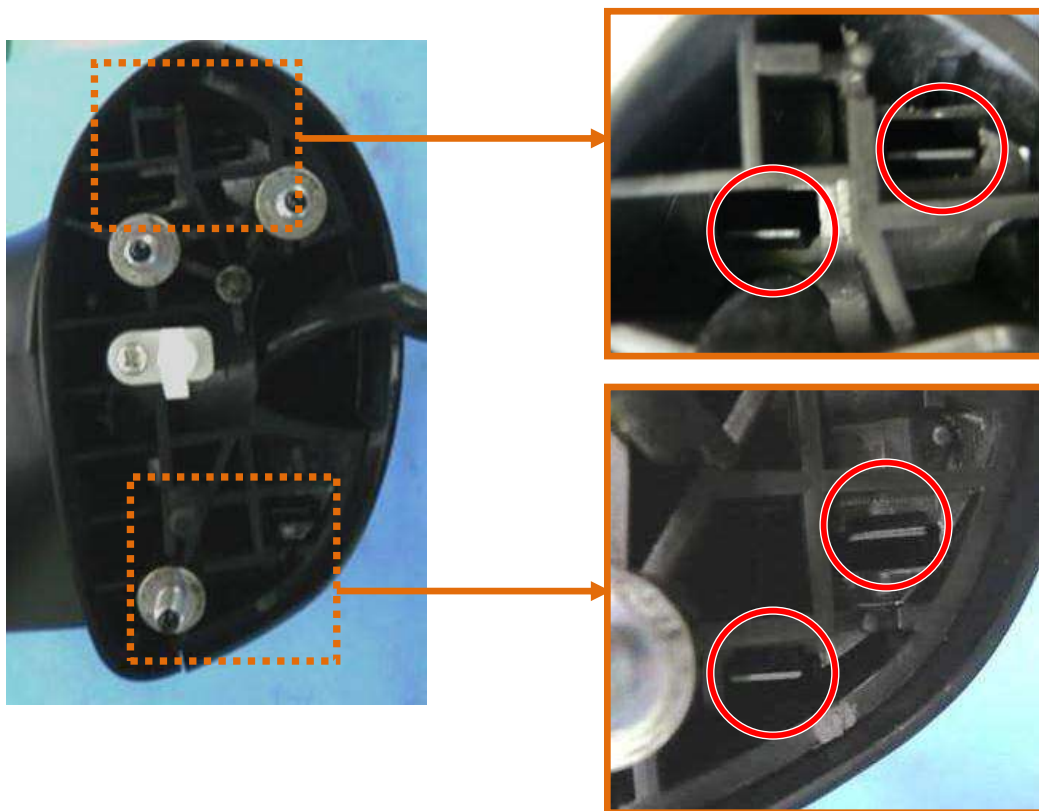

2. Remove the sealing rubber from the outer mirror base.

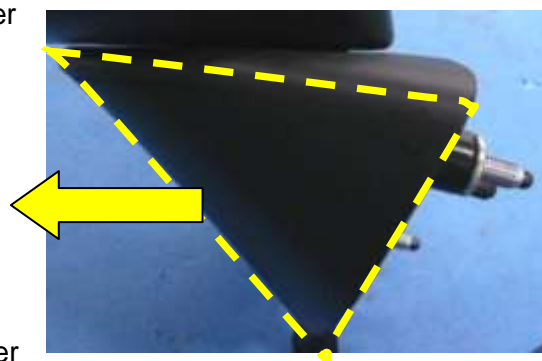

3. Snap off the boss to which the push nut is installed by pliers and remove the push nut.

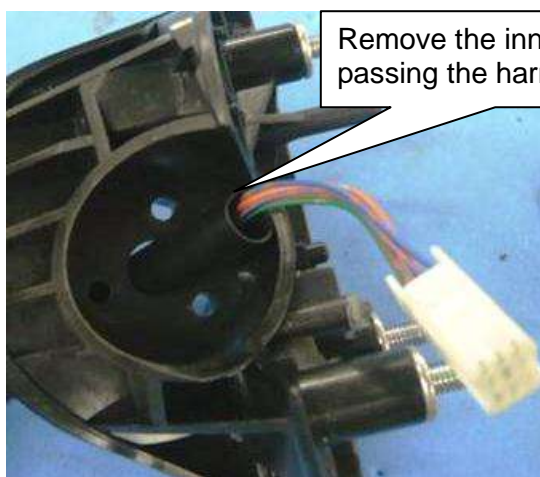

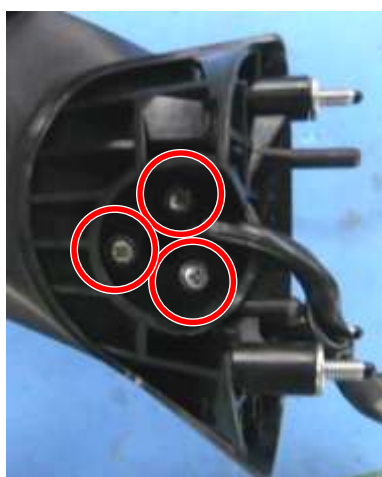

4. Disconnect the 4 connections shown in below pictures using a flathead screw driver

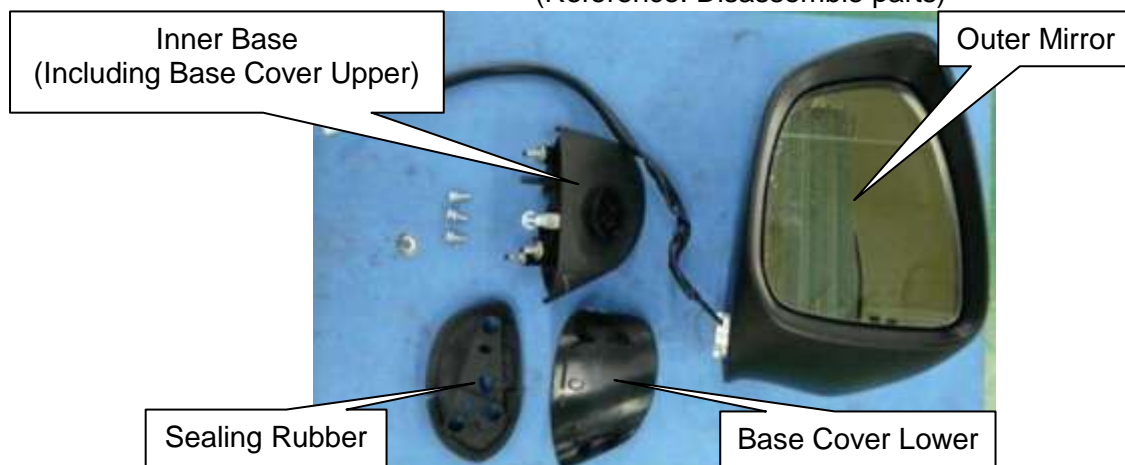

5. If the connection is disconnected, remove the cover pulling in the direction of the arrow mark in picture.
* **Replace the base cover with a new one.**

6. Remove the screws, and remove the upper base cover and inner base together.
* **Some model use the TORX screw (T25)**

(Reference: Disassemble parts)

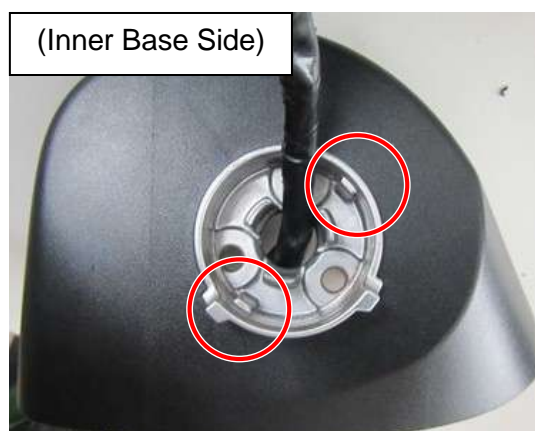

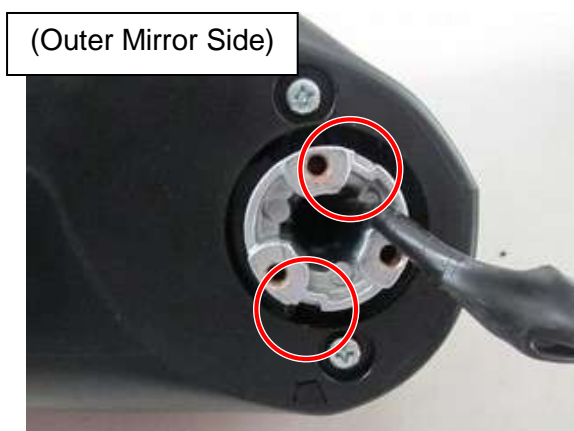

7. Pass the harness through the new inner base (Aluminum).

8. Install the inner base to the outer mirror matching the positioning projections which are marked with the red circles in the pictures.

Note: Be careful not to pinch the harness.

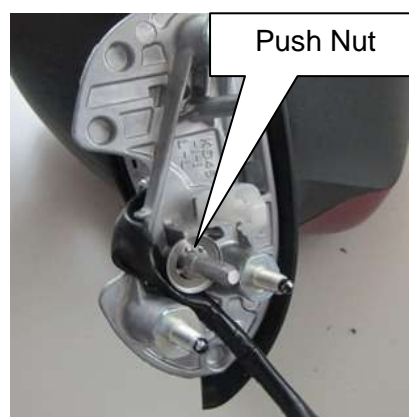

(Reference: Subassembly condition with outer mirror and inner base.)

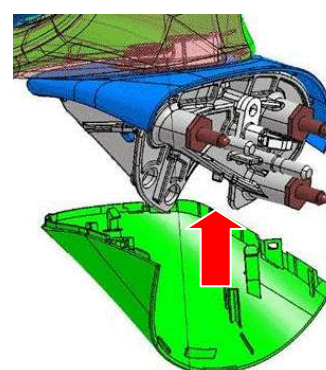

9. Install the inner base to the outer mirror using new screws (included in the base cover set).
TORX screw (T25)
Tightening Torque: 5.3 +- 0.5 Nm

10. Push through the wire harness and install the new push nut (included in the base cover set) as per below picture.

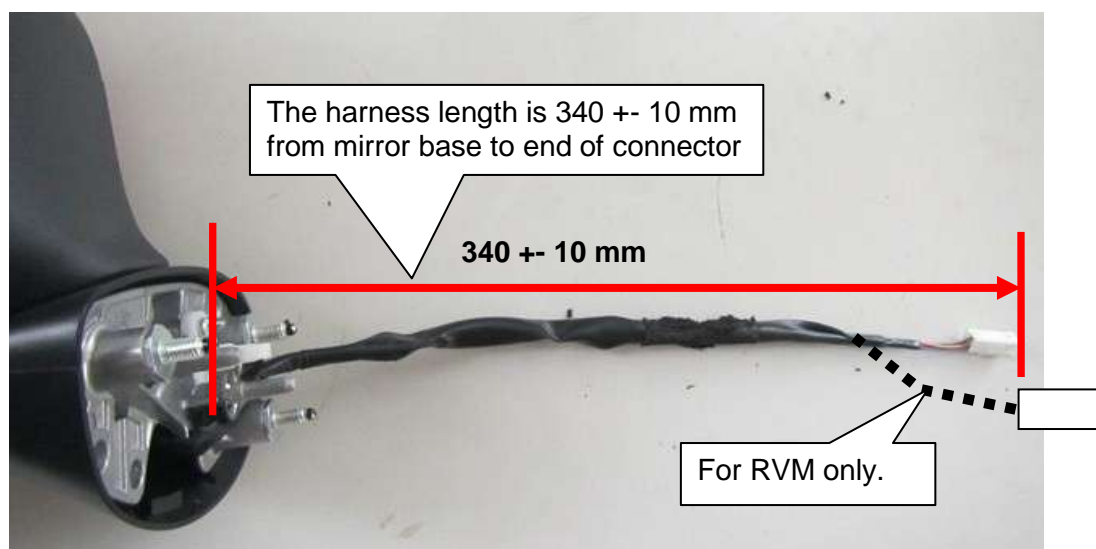

11. Align the both locators and install the base cover to the inner base as per below picture.

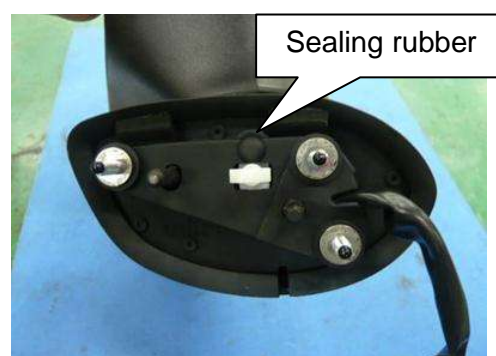

12. Confirm that the harness length from the mirror base to the end of connector is 340 +/- 10 mm.

Note: For the 2 connectors type harness (with RVM), measure the length from the shorter connector.

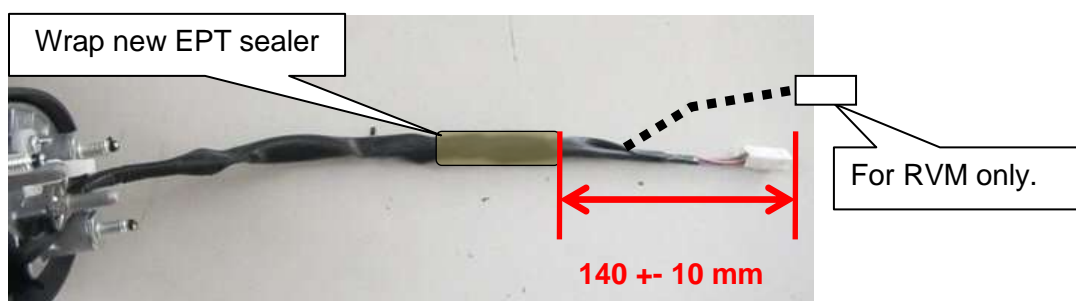

13. Install the new sealing rubber (included in the base cover set) to the mirror base.

14. Remove off the old EPT sealer from the harness and wrap new one (included in the base cover set) on the same position.

The position is 140 mm from the end of connector. If the harness is 2 connectors type, the position is 140 mm from the shorter connector.

15. Install both sides or one side of mirror to the vehicle following the workshop manual "POWER OUTER MIRROR REMOVAL/INSTALLATION".

*** Replacement of mirror base and cover on the right side is identical.**
