

Bases and inspired by Dason Wong's Mazda RX-8 Navigation Hood Control Mod
 i made this mod for my Mazda 3 Bk but instead of using a tablet a 7" Garmin navigation system was used.
 Unfortunately a wiring diagram wasn't made by anybody who did this mod and a lot of ppl (including me) became desperate.
 So i invested a lot of blood, sweat & tears and finally made it. And for all of those lost souls who didn't figured the wiring out
 i made a wiring diagram. Hope you guys & gals are able to do the mod now.
 If you want to appreciate my work, you're welcome go give me a little donation
