

M-TIPS

2004 RX-8 (A/T)

Gear Range Indicator Change

Beginning with Nov. 1, 2003 production, the gear range indicator on automatic transmission equipped vehicles displays in both “D” position and in the “manual” mode.

Gear range indicator displays in “D” position and in “Manual” mode since Nov. 1, 2003 prod.

Earlier production vehicles built before Nov. 1, 2003 display the gear range indicator in the “manual” mode only, not in “D” position. This is normal operation, do not attempt any repairs.

NOTE: It is not warrantable to replace the ICM on early production vehicles in an effort to add this change.
