

## 2008 Mazda5 / 2009 RX-8

### Multiple Navigation Discs RI5722

2008 Mazda5 and 2009 RX-8 vehicles equipped with navigation come with 2 navigation discs (A and B). Each disc applies to different states (regions). The general break is the Mississippi River, with Disc A applying to states to the West and Disc B for states to the East. Both discs contain data for all of Canada.

When entering a destination and/or way point, the correct disc for the desired destination needs to be inserted. Once your destination has been set, while under route guidance to that destination, you can change discs to add a way point and to search points of interest (POI) in a different region than your destination. Once selected and the route guidance has started, the system will guide you to your destination no matter which disc is inserted.

Even if you're in a point that is outside the region for the inserted disc, the system will still accurately display your current location and show some points of interest. For best results insert the correct region map for the vehicle's current location.
