

# M-TIPS

## ***2004 RX-8***

### ***Room Fuse/Battery Note***

When installing the 15 amp room fuse, or when battery power is restored, remember to turn the ignition switch to ACC position for 5 seconds before turning the ignition switch to ON or Start position. This sets the system voltage for the PCM & Navigation controllers.

**Note:** Vehicles equipped with Navigation may experience operating problems if this procedure is not performed for the first time after installing the room fuse or restoring battery power.
