LOW DUST • LOW NOISE • IMPROVED BRAKING

# What's Stopping You?

I have now used the Hawk Performance Ceramic Brake Pads for over a month. I use my 2002 Z06 as my daily driver and track time car. First I want to report to you, I have battled with brake dust on my various Corvettes since 1997 and I have to say you've got a winner! The dust these

pads produce is far less than the stock pads, and it actually keeps the rims looking good for about 3 times as long. That's the first good news! Even better is the noise level of the pads for a performance pad, there is none! It's an absolute pleasure to have a performance pad that doesn't loudly announce its arrival before every stop. And most importantly, the pads perform as promised, they do a great job of stopping!

*These pads are the best of all worlds for a daily driver that occasionally sees the track.*

Eckler's Corvette Parts

Well, the pads are in and let me start by saying, they are awesome. The NEW Hawk Performance Ceramic Brake Pads grip the moment you touch the pedal. The feel is instant and you have to relearn your car over again. Once you get use to the grip, you can modulate the pedal in

the top half to control the car. Scrubbing off 40km of highway speed only requires a light tap on the pedal. The second part of the travel will have you stopping short of your mark. I'm sure these things have cut 30-40ft off of my braking. No fade, no noise, no dust!

*This is the pad for the aggressive street driver.*

## HP PERFORMANCE CERAMIC PROFESSIONAL BRAKE TUNER COMPOUND

This unique ceramic composite formulation was specifically developed to meet the ultra-low dust, low noise performance of OE ceramic brake pads, while maintaining the high friction levels professional brake tuners have grown to expect from our products. Performance Ceramic brake pads also feature a fade resistant, linear friction profile that allows your ABS brake system to work more effectively.

**Performance Ceramic - quiet, clean, safe and fast stopping.**

### Key Features:

- Extremely quiet.
- Stable friction output.
- Ultra-low dust.
- Extended pad life.
- Increased rotor life.
- Improved braking over OE.
